## METRICS SINCE INCEPTION

Beta	Correlation	Tracking Error	Standard Deviation
0.97	0.91	5.8%	13.9%

**Beta** represents the tendency of the fund's return to respond to market swings. <1 means the fund has less volatile returns than the index. **Correlation** measures how two instruments (fund and index) move in relation to each other: +1 is perfect positive correlation. **R-Squared** is a number 0 to 100 representing the percentage of a fund's movements explained by movements in its index. A high number indicates a more useful beta figure. **Standard Deviation** is a measurement of investment volatility (up and down) that illustrates how much dispersion there is from the mean. The lower the standard deviation the closer the data points are to the mean (average).
